INTRODUCTION

Career Education is defined by the Ohio State Department of Education as a program which endeavors, through the regular curriculum, to provide all youth in the school with motivation toward the world of work, orientation to the many job opportunities available, and exploration of occupations consistent with individual interests and abilities which help youth benefit from and plan for pre-professional instruction or vocational education.

This curriculum guide has been prepared by the Willoughby-Eastlake Career Education Component Committee. The activities described herein have been successively implemented by teachers in the Willoughby-Eastlake school system. As new activities are designed the Component Committee will expand this manual and include those practices which have been found to be successful.

The intention of the committee is not that every student participate in the activities suggested or that every teacher utilize them. The activities are presented with the hope that they may stimulate you, the teacher, in developing interesting and productive Career Education experiences for your students. The role of the committee is to facilitate career-related activities and disseminate information to fellow educators through this guide.

CAREER ORIENTATION

The Ohio Career Development Model at the 7th and 8th grade level, career orientation, states that students are to be exposed or oriented to the fifteen U.S.O.E. occupational clusters.

As a strategy to orient all 7th and 8th grade students to the occupational clusters, each subject area has been given the responsibility of a specific cluster or clusters. (See attached chart "Career Orientation Sequencing of Occupational Clusters.")

Within each subject assigned cluster, strategies have been developed to aid the classroom teacher. The following strategies have a developmental objective, related behavioral objectives and activities described to aid the teacher.
